MOTION PICTURE/TV PRODUCTION

PHYSICIAN CORE CARE:

Customized Solutions to Meet Your Specific Production Needs

Coast-to-Coast Presence

Physician Core Care (PCC), a healthcare consulting and laboratory management company, understands the importance of having reliable, trustworthy partnerships in the COVID-19 testing and Personal Protective Equipment (PPE) realms. With a network of laboratories covering all 50 states, testing not only for COVID-19 but also a full panel of respiratory pathogens, we can formulate a comprehensive plan to meet your specific production needs.

A Wealth of Testing Options

PCC offers nasal and saliva PCR (Polymerase Chain Reaction) tests, which are analyzed on a laboratory machine that looks at samples at a molecular level. Antigen tests also utilize a nasal swab and detect the proteins of the virus itself. These tests continue to play a vital role for surveillance testing. Antibody tests look for evidence that a person's immune system is responding to being infected. Results of these tests can be delivered in as little as 10 minutes.

Masks and Gloves

The Centers for Disease Control (CDC) has long advocated the use of masks to slow the spread of transmission of COVID-19, and in many states across the country, wearing a mask is mandatory when in public. Whether it's an N95 respirator, KN95 masks or surgical masks you're looking for, we have you covered. Gloves play a vital, frontline role in the prevention of healthcare-associated infections and cross-contamination. Whether they're being used for food preparation, the cleanup of hazardous spills, or treating wounds, we have gloves for almost every purpose.

Face Shields and Goggles

When the luxury of physical distance isn't available, used in conjunction with masks, both face shields and goggles are vital to mitigating the spread of viruses and other airborne pathogens. Eye protection is essential for on-set medical care, in constructing sets, and many other daily uses.

Antimicrobial Cleaning Solutions

Even at the best of times, keeping a movie set clean is no small task. Now in the era of COVID-19, keeping frequently touched surfaces sanitized is priority one. PCC offers several brands of revolutionary antimicrobial cleaning agents that create a microscopic shield, binding themselves to both porous and non-porous surfaces alike. Among many others, this shield protects against Coronavirus, Influenza, E Coli, MRSA, and Staph aureas.

Ventilation

Regardless of whether your set is in a gym, bar, church, restaurant, or convention center, you will need to ensure that the physical space in which you're shooting is properly and safely ventilated. Thanks to our HEPA air filtration solutions, you'll get 12-15 air return solutions per hour, keeping airborne pathogens at bay and your production on track. Our experts will provide a customized, needs-based solution and provide your entire production with peace of mind in these wildly uncertain times.

Tents, Tables & Chairs

It is never an easy task to feed an entire set in the best of circumstances, let alone when social distancing is the new normal. We have ready-made solutions to ensure that people stay spread out, while making certain that your budget stays on track.

Relevant Experience

The leadership team at PCC brings a wealth of experience in the areas of risk mitigation, lab management, and market analysis. Since early 2020 when this pandemic reached our collective consciousness, we have assisted schools, manufacturers, government entities and healthcare providers navigate these uncharted waters. Put our 100+ years of grit and experience to good use and tackle these challenging times head on.
